

# David GENOTELLE

Medical Mechatronics Engineer

## Personal Information

Nationality: French  
Date of Birth: 30/06/2003  
Driver's license

## Technical Skills

### Programming

- Python, C++, Java, ROS2
- MATLAB, LabVIEW
- Arduino, L<sup>A</sup>T<sub>E</sub>X

### AI & Data

- Machine & Deep Learning
- VLA, CNN
- Transformers, PyTorch

### CAD Software

- PTC Creo, Fusion 360
- Cura/Bambustudio, Trotec
- Proteus, QElectrotec

### Robotics

- Robot modeling and control
- Sensors and actuators
- Mechatronic system integration

## Languages

- French (Native)
- English (TOEIC C1)
- Spanish (B1)

## Interests

- Guitar (Since 2009)
- ULA Pendulum (Pilot License)
- Build & Craft stuff

+33 6 33 99 20 84

## EDUCATION

|               |                                                                                                                                |                                                                                     |
|---------------|--------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 2025–2026     | <b>Telecom Physique Strasbourg</b><br>INTERNATIONAL RESEARCH MASTER IRIV HEALTHTECH · Master's degree 📍<br>Health Technologies |  |
| 2021–2026     | <b>National Institute of Applied Sciences</b><br>INSA OF STRASBOURG · Fifth year 📍<br>Mechatronics Engineering                 |  |
| Jan–June 2025 | <b>International Mobility in South Korea</b><br>DGIST · Daegu 📍<br>Medical Imaging, Robot Locomotion and Compliant Electronics |  |

## WORK EXPERIENCE

|           |                                                                                                                                                                                                                                                                                                                          |                                                                                       |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 2025–2026 | <b>Final Year Project &amp; Engineering Internship - Medical Robotics</b><br>11 MONTHS – ICUBE · IHU Strasbourg 📍<br>Developing a robotic scrub nurse assistant using Imitation Learning ( <i>AI Control method</i> ), training a bimanual robot through teleoperated demonstrations to perform surgical handling tasks. |    |
| 2025      | <b>R&amp;D Intern in Mechanics</b><br>2 MONTHS – ORTHOPUS · Nantes (44) 📍<br>Redesigned and optimized a tripod for a medical exoskeleton, improving stability, weigh and footprint using CAD, theoretical modeling and bench testing.                                                                                    |  |
| 2024      | <b>Aircraft Mechanic Intern</b><br>1 MONTH – DELTA AQUITAINE DIFFUSION · Montpezat-d'Agenais 📍<br>Assisted in the maintenance, inspection, and assembly of Ultra Light Motorized (ULM) aircraft.                                                                                                                         |  |

## PROJECTS

|             |                                                                                                                                                                                                                                                                                                     |                                                                                       |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 2023–2025   | <b>Low-Tech Automated Greenhouse Project</b><br>INSA · Strasbourg 📍<br>Led the design and development of an automated greenhouse ventilation system, defining the electronic architecture and programming the control system in C++ to regulate temperature and humidity. <i>See Github project</i> |                                                                                       |
| 2025        | <b>Student Fablab Technician</b><br>IDEAS'LAB · INSA Strasbourg 📍<br>Assisted students with safe use of manufacturing machines (3D printing, laser cutting) and helping their part production.                                                                                                      |  |
| 2023 - 2025 | <b>Junior-Entreprise Projects</b><br>AEP · INSA Strasbourg 📍<br>Optimized a rangefinder with UWB protocol; designed and produced a suitcase (3D printing, laser cutting).                                                                                                                           |  |
